

World Meteorology Day

Every year the day is celebrated with a different theme or slogan. This year the theme of the day is “**The Ocean, our climate and weather**”. The World Meteorological Organization (WMO) came into existence on March 23, 1950. Since then the day is celebrated as World Meteorological Day. The themes chosen for World Meteorological Day reflect topical weather, climate or water-related issues.

The ocean covers around 70% of the earth’s surface and it also plays an important role in climate change. National Meteorological and Hydrological Services and researchers regularly monitor the ocean and how it is changing. This year’s theme celebrates the WMO’s focus on connecting the ocean, climate and weather within the Earth System.

WORLD METEOROLOGICAL DAY VISION:

“By 2030, we see a world where all nations, especially the most vulnerable, are more resilient to the socioeconomic consequences of extreme weather, climate, water and other environmental events; and underpin their sustainable development through the best possible services, whether overland, at sea or in the air”.

ACTIONS TO MITIGATE CLIMATE CHANGE
